

CapyBucks - Whitepaper

Created and maintained by CapyLabs — a Web3 collective founded by Brazilian developer D.L.F.

1. Executive Summary

CapyBucks is a meme-inspired cryptocurrency that blends humor, community, and real-world utility. With a total supply of 1 trillion tokens and a unique deflationary model, CapyBucks aims to create a fun, engaging, and rewarding experience through NFTs, gaming, and social engagement.

2. The Vision: What is CapyBucks?

CapyBucks was created to capture the spirit of Brazil's most iconic chill animal — the capybara. It represents calm in chaos, and that's exactly what CapyBucks brings to the crypto world: a lighthearted token with strong community potential and creative use cases.

3. Why CapyBucks?

While many memecoins rely solely on hype, CapyBucks offers more: an integrated mini-game, collectible NFTs, and rewards tied to real interaction. It's not just a token — it's a movement built around fun and utility.

4. Tokenomics

Total Supply: 1,000,000,000,000 (1 Trillion Tokens)

- 30% Airdrop
- 20% Initial Burn
- 15% Liquidity Pool
- 15% Marketing and Development
- 10% Team (locked with vesting)
- 10% Reserved for Partnerships and Staking

A 1% burn is applied to every transaction, creating a deflationary effect over time.

5. Roadmap

Phase 1: Token Creation, Website, Branding

Phase 2: Community Building, Airdrops, NFT Design

Phase 3: Game Launch (CapyFlap), First NFT Collection Release

Phase 4: Partnerships, Listings, Marketplace Integration

6. Utility & Ecosystem

CapyBucks is more than a memecoin. It supports:

- CapyFlap Game — a web-based, Flappy Bird-inspired game
- NFT Unlockables — capybara skins, rare drops, and secret game levels
- Future CapyStore — exclusive merchandise available for CapyBucks

7. NFTs

CapyBucks holders can mint exclusive NFTs using their tokens. These NFTs include cosmetic upgrades in the CapyFlap game, access to hidden content, and limited edition artwork representing community milestones.

8. Security and Transparency

CapyBucks uses standard audited smart contracts (based on OpenZeppelin), all transactions are publicly traceable, and token distribution will be verifiable. Liquidity will be locked, and tokens allocated to the team will be released with vesting periods.

9. Conclusion

CapyBucks brings together memes, culture, and community in a deflationary crypto project. Through gamification, NFT integration, and a vibrant identity, it offers fun, fairness, and long-term vision — all inspired by the legendary chillness of the capybara.
